

J-20, J-25 & J-30 Series

Fluid jet micronizers designed for 'R & D'

[Jet mill systems](#) are the ideal choice for micronising pharmaceutical powders down to 1 micron in size.

{xtypo_info}Especially developed for pharmaceutical applications, the **J-20, J-25 & J-30** Fluid Jet Micronizers are designed for laboratory and R & D works.{/xtypo_info}

Based on the intuitive and highly efficient jet milling technology developed by **Tecnologica Meccanica** (Italy),

the

J-20

,
J-25

&

J-30

series of

[Fluid Jet Micronizers](#)

are capable of yielding extremely narrow tight particle size distribution (PSD) curves of $d_{100} < 5\mu\text{m}$ (100% below $5\mu\text{m}$) and $d_{99} < 3\mu\text{m}$ (99% below $3\mu\text{m}$) or even less depending on the nature of the product.

Profile

The

J-20

'laboratory' fluid jet micronizer has been designed on the

The

J-20

works at a constant temperature (endothermic) and independent of the

{xtype_quote}Thanks to its modular design concept, the **J-20** can be upgraded, on request, to the **J-25** or

Features

- Processing batch sizes ranging from 0.2 to 100.0 g
- Minimum batch of 50 mg *'Milligram Kit'* configuration
- Productivity from 0.50 to 100.00 g/hour
- One single collecting point
- Scalability of the process to bigger micronizers
- Metal contamination below 1 PPM (particles per million)
- Two different filter sleeve sizes
- Two different collecting bin sizes
- Quick and easy assembling and disassembling of the system with a limited number of clamped components
- Simplicity of the whole unit
- Miniaturized dimensions
- Equipped with a skid-mounted *Process Gas Generator* for feeding treated gas to the jet mill
- The **J-20** is manufactured in AISI type 316L (EN 1.4404) stainless steel

Benefits

Ability to micronize very small batches/samples from 0.2 to 100 g with (even 20 mg) the extremely narrow

Pharmaceutical laboratories all over the world are concentrating their research efforts on new molecules

Until recently, researchers had to settle for R&D fluid energy jet mills able to micronize batches starting from 100g

Technical Specifications

Milling Chamber: J-20

- Process gas at 7 bar=0.08 m³/min (2.82 CFM)
- Process gas at 12 bar=0.20 m³/min (7.06 CFM)
- Estimated capacity=from 0.50 to 100.00 g/hour

Milling Chamber: J-25

- Process gas at 7 bar=0.14 m³/min (4.94 CFM)
- Process gas at 12 bar=0.24 m³/min (8.47 CFM)
- Estimated capacity=from 5.00 to 300.00 g/hour

Milling Chamber: J-30

- Process gas at 7 bar=0.17 m³/min (6.00 CFM)
- Process gas at 12 bar=0.28 m³/min (9.89 CFM)
- Estimated capacity=from 5.00 to 600.00 g/hour

Options

Numerous configurations are available and can be offered to tailor our micronization technology to your application

The following options are already available:

- **J-20** with a 'milligram kit'
- Single and double screw feeders
- Low Emission version fitted with a Hepa filter ()
- Automatic shaking system
- Balance line
- Cold/cryogenic processing ()
- **J-20** , **J-25** ,
- Explosion proof version
- Totally contained solution in a glove box

{/faq}

Find out more about [Micronization Technology](#) and its advantages to your applications below:

{faq inline/sliders}

What is Micronization Technology?

Micronization Technology is a term that refers to the complex process of producing highly-refined powders.

Generally, this is a complicated and rather expensive process with wide applications in various fields, particularly in the pharmaceutical industry.

How Does **Micronization Technology** Work?

Process powder is fed tangentially at subsonic speeds (approximately 50 m/s) into the flat cylindrical milling chamber.

The micronizing effect occurs when the slower incoming powder particles and the faster particles in the chamber collide.

Watch the micronization effect in a jet mill below:

This process works at a constant temperature (endothermic) and independently with the lowest consumption of energy.

The

Particle Size Distribution (PSD)

is controlled by adjusting two main parameters:

- **PRESSURE** : The energy used to micronize; increased pressure increases the energy of the particles.
- **FEED RATE** : The concentration of product fed into the milling chamber.

The Fluid Jet Micronizer Advantages

- Enhanced hi-tech milling chamber geometry
- Nozzles designed for laminar jet streams and available with different grinding angles
- Optimized static classifier
- Elimination of the "caking" of sticky powders
- Narrow Gauss curve (particle size distribution)
- Lowest gas consumption on the market

- Elimination of the "blowback" phenomenon
- Optimised gas-solid separation and unique collecting point with yields close to 100%
- Balance and control of pressures within the whole micronisation system
- Reduction of contact surfaces – rapid cleaning and lower product loss
- Easy cleaning and validation operations
- Sterilizing system with hydrogen peroxide solution
- Inexpensive and easy to operate
- Capable of processing products with high solvent content (around 3000 ppm)
- Capable of processing sticky powders that do not flow well

Find Your Fluid Jet Micronizer Solution

Tecnologia Meccanica has over 40 years experience with [Micronization Technology](#) . It currently manufactures [Fluid Jet Micronizers](#)

Each size caters for a different requirement, depending on your application. If you are at all unsure or re
